

PRESS RELEASE

THE RETURN TO ANALOG CONTROL

PLH presents the new **Slider** control component, which joins the existing round, square, and lever controls in the MakeUp, Skin, Slim, Mono, and Keyboard collections. It redefines the way we interact with the environment through a fluid, natural, and intuitive gesture. With Slider, PLH continues to push the boundaries between design, aesthetics, and technology, bringing to the market a system that does not merely manage light but creates an experience, transforming every movement into an emotion.

From Gesture to Emotion: The Heart of Slider

At the heart of Slider lies a simple idea: the natural movement of sliding.

Everything flows, time, raindrops sliding down a surface, the passing of seasons, the movement of a stream, the rhythm of the tides.

Just like these natural elements, Slider activates with a smooth, continuous motion. Whether moving right to left or top to bottom, it allows for effortless adjustment of light intensity, sound volume, color temperature, and more. A single motion is enough to control the environment with the same spontaneity with which we interact with the objects around us every day. "From motion to emotion" is not just a concept, each adjustment becomes a sensory experience, transforming space in harmony with the user's emotions and desires. With Slider, every environment comes to life, responding naturally to those who inhabit it.

One Gesture, Infinite Possibilities

Inspired by the sliding faders of audio mixers, PLH's Slider transforms the control of light, sound, color, fragrance, and more into an intuitive and sensory experience. With a simple movement, everything becomes adjustable, creating customized atmospheres:

Aroma: Slider allows you to fine-tune and control the intensity of fragrance diffusion in the space. RGB Control: With three sliders, it enables a natural modulation of color shades.

Tunable White: From warm white to cool white in a single motion, adjusting light temperature to match visual comfort and well-being. White: A simple and direct control, adjust brightness, turn lights on or off with a natural gesture. Movement Control or Fun: Slider goes beyond lighting, revolutionizing control over motorized devices such as fans, electric blinds, or projectors. Sound: Sound becomes a completely new experience. Slider not only adjusts volume or turns music on and off but also allows detailed audio customization.

Advanced Technology & Maximum Customization

Slider seamlessly integrates with the most advanced technologies. Every detail has been designed to ensure a smooth and intuitive interaction, without compromising precision and reliability. With DALI 2 and KNX compatibility, it fits perfectly into the most sophisticated home automation systems, ensuring efficient and flexible control of lighting and other devices.

Beyond technology, design plays a key role. Staying true to PLH's DNA, Slider is available in multiple configurations and an infinite range of finishes, ensuring seamless integration into the MakeUp, Skin, Slim, Mono, and Keyboard collections.

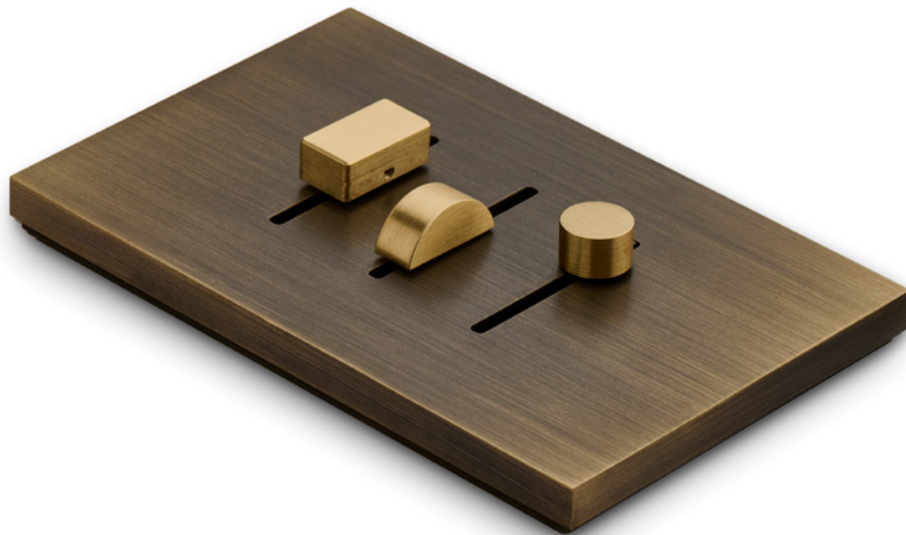

MakeUp & Skin versions: Available in square (81×81mm) and rectangular (124×81mm) formats, with a 10mm thickness. Controls can be combined with traditional buttons or arranged in an all-slider layout. Slim collection: Features 124×40mm and 152×40mm sizes, with an ultra-thin 4mm profile, characteristic of the iconic Slim plate. Here too, sliders and buttons can be combined, or a full-slider configuration can be chosen.

Thanks to a wide range of materials, including brass and aluminum, Slider integrates elegantly and harmoniously into any setting, from the most classic to the most contemporary.

With this new addition, PLH once again confirms its pioneering role in the industry, introducing a control system with an analog feel but a fully digital core. A system that does not just manage the environment but transforms it into an immersive, intuitive, and engaging experience, merging technology, aesthetics, and emotion into a single solution.

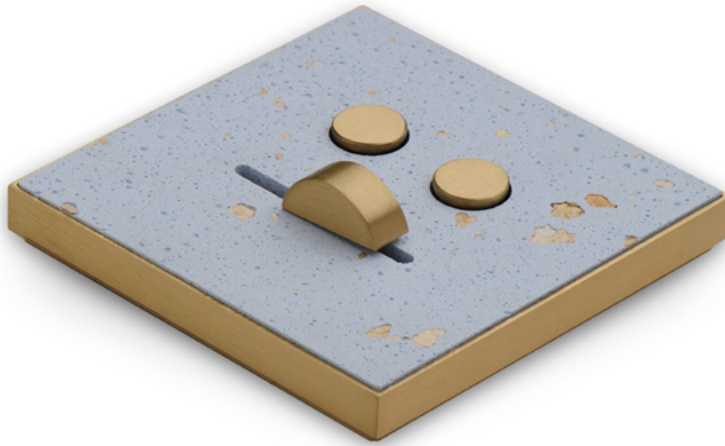

PLH Mono Collection: Button and Slider with nano-ceramic coating.

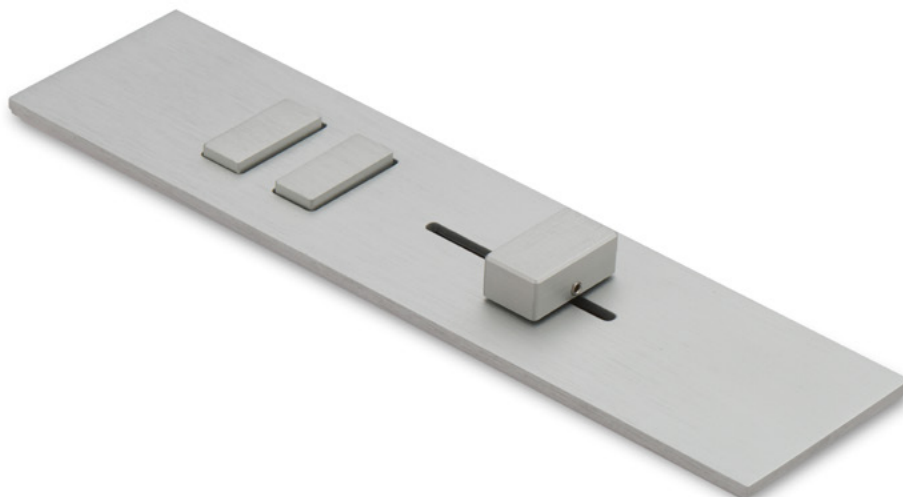

PLH MakeUp Collection in satin-bronzed brass: 3 different Slider options.

PLH Slim Collection in anodized aluminum: Slider with half-moon option.

PLH Skin Collection: plate and controls in protected brushed brass. Insert in Cimento M3.

PLH Slim Collection: plate and controls in natural satin anodized aluminum.
